INSTALLING ON Windows 7

When you install our software on Windows 7 you must follow the extra instructions below to stabilize the system ID before you can get a product registration code that will unlock the program.
If you do not follow these steps the registration code we issue will not unlock the program.

Step 1
Install the program from the CD according to the installation instructions provided with the software. You will receive a message that the program installation was completed successfully. When finished **do not** open the program until you have completed the rest of these steps.

Step 2
Set the program to run in Windows XP compatibility mode as follows…

Go to Start, All Programs and click on the appropriate program group.
Locate the purple shortcut that opens the program, right click on it and choose properties.
In the Properties window click on the Compatibility Tab.
Place a check mark in the box next to "Run this program in compatibility mode for: "Windows XP (Service Pack 2 or 3)"
Also Place a check mark in the box next to "Run this program as an administrator".
Click on the "Apply" Button and then click on the "OK" button to close the properties window.

Step 3
Then open the program. When you come to the registration screen where you see the System ID (that we need to use to calculate your registration code), Write down the system ID then click the cancel button to close the program.
Then open it again and make sure the System ID is the same as the first time.

Once the System ID is staying the same each time you open the program you can contact us with your System ID to get a registration code that will unlock the program. If this is not the first time you have gotten a registration code for the program you will need to use the "New Code" form to get a new code.
